

Как сделать RCP.

1. Открыть Eclipse. New->Java Project->Create project from existing source (имя - PlDocToolkit)->Finish.

2. Двойным щелчком запустить файл pldoctoolkit\_dep.product и перейти на вкладку Dependencies. Проверить, все ли плагины включены (их должно быть 148 –см. Приложение)

3. Перейти на вкладку Overview.

4. В этой вкладке найти раздел Exporting и нажать Eclipse Product exporting

5. Проверить конфигурацию. Она должна быть такой:

/PlDocToolkit/pldoctoolkit\_dep.product

6. Root Directory: папка, в которой будет exe-файл. Вместо eclipse можно назвать как-нибудь по-другому.

7. Destination:

- Directory: задать папку для хранения RCP-приложения (в конечном итоге в ней будут 2 папки: repository и папка с exe-файлом)

8. Нажать Finish

## Приложение: плагины, необходимы для RCP-версии
